

# An Introduction to Web Development with Ruby on Rails

Presented by Zach Montoya

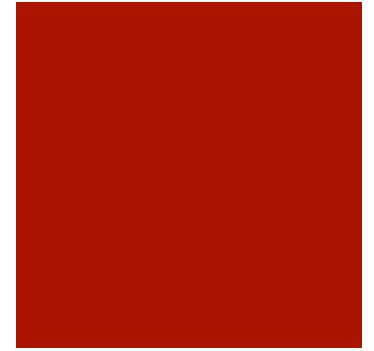

# The Interwebz

# In a Nutshell

# What Goes Into a Web Page

- HTML
  - Mark-up
  - Headings, paragraphs, lists, images
- CSS
  - Style
  - Sizing, padding, background and foreground colors, animations
- Javascript
  - Client-side behavior
  - Loading data, changing HTML elements, animations

# What ELSE Goes Into a Web Page

- Server-side Technology
  - Performs backend logic
  - E.g. PHP, Ruby on Rails, ASP.NET
  - Interacts with databases...
- Databases
  - STORE DATA
  - E.g. MySQL, PostgreSQL, Microsoft SQL Server, Hadoop
  - Two main varieties: Relational databases, NoSQL databases

# Ruby on Rails

# Terms I'll Use

- Ruby
- Rails
- Erb

# What is it?

- A framework
  - Follows MVC model (Model-View-Controller)
  - Enforces structure
  - Makes life WAY EASIER for you
- Uses Ruby for controller logic
  - Very much like Python
  - Object oriented – EVERYTHING is an object
  - Dynamically typed
  - Extremely readable
  - Kinda quirky

# MVC

## Model

- Represents an object in OO
- Translates directly to DB structure
- Contains methods and properties

## View

- The page that is displayed to the user
- Corresponds to a model

## Controller

- Communicates between Model and View and may handle session data
- Corresponds to a model

# Application Structure

- app/
  - assets/
    - javascripts/
    - stylesheets/
  - controllers/
  - helpers/
  - models/
  - views/
- config/
- test/

# Makes life easier?

- Form Helpers

- Ex.

- ```
form_tag({controller: "people", action: "search"},  
method: "get", class: "my_form")
```

- Ex.

- ```
label_tag(:name, "Your name")
```

- Rails Asset Pipeline

- Allows easy reference to assets

- In view: `<% image_tag("rails.png") %>`

- application.js and application.css (can be disabled)

- By default, preprocessing for Sass and Coffeescript

# Makes life easier?

- Active Record
  - An implementation of Object Relation Mapping (ORM)
  - Structured naming conventions

Model / Class	Table / Schema
Post	posts
LineItem	line_items
Deer	deers
Mouse	mice
Person	people

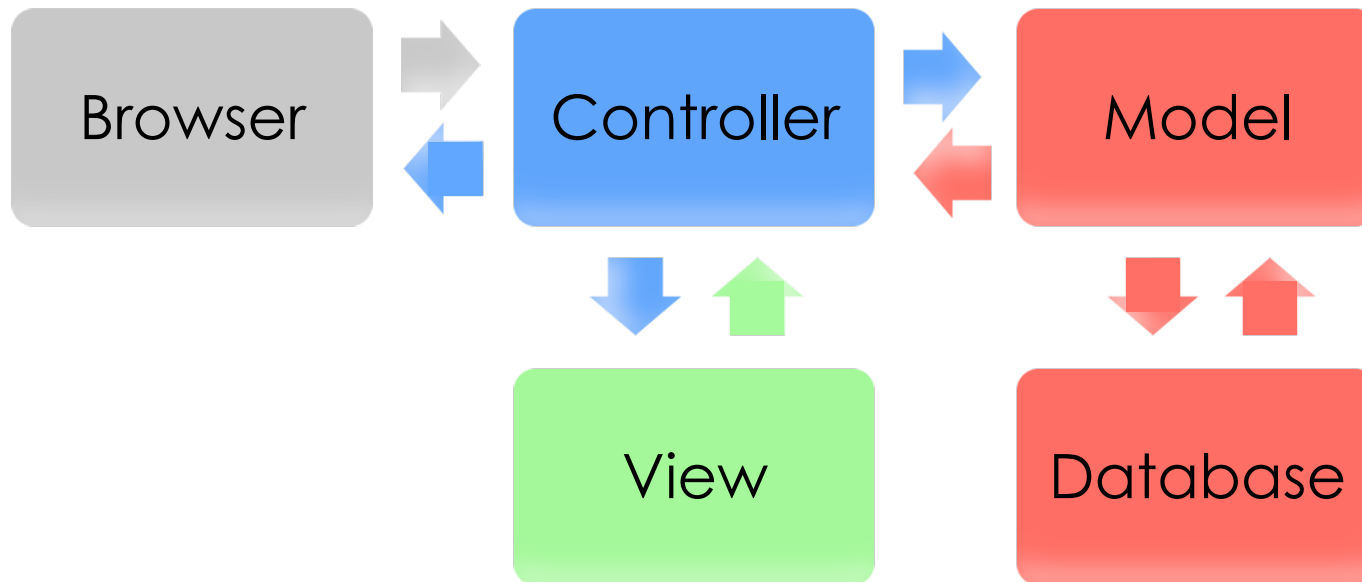

1

# Makes life easier?

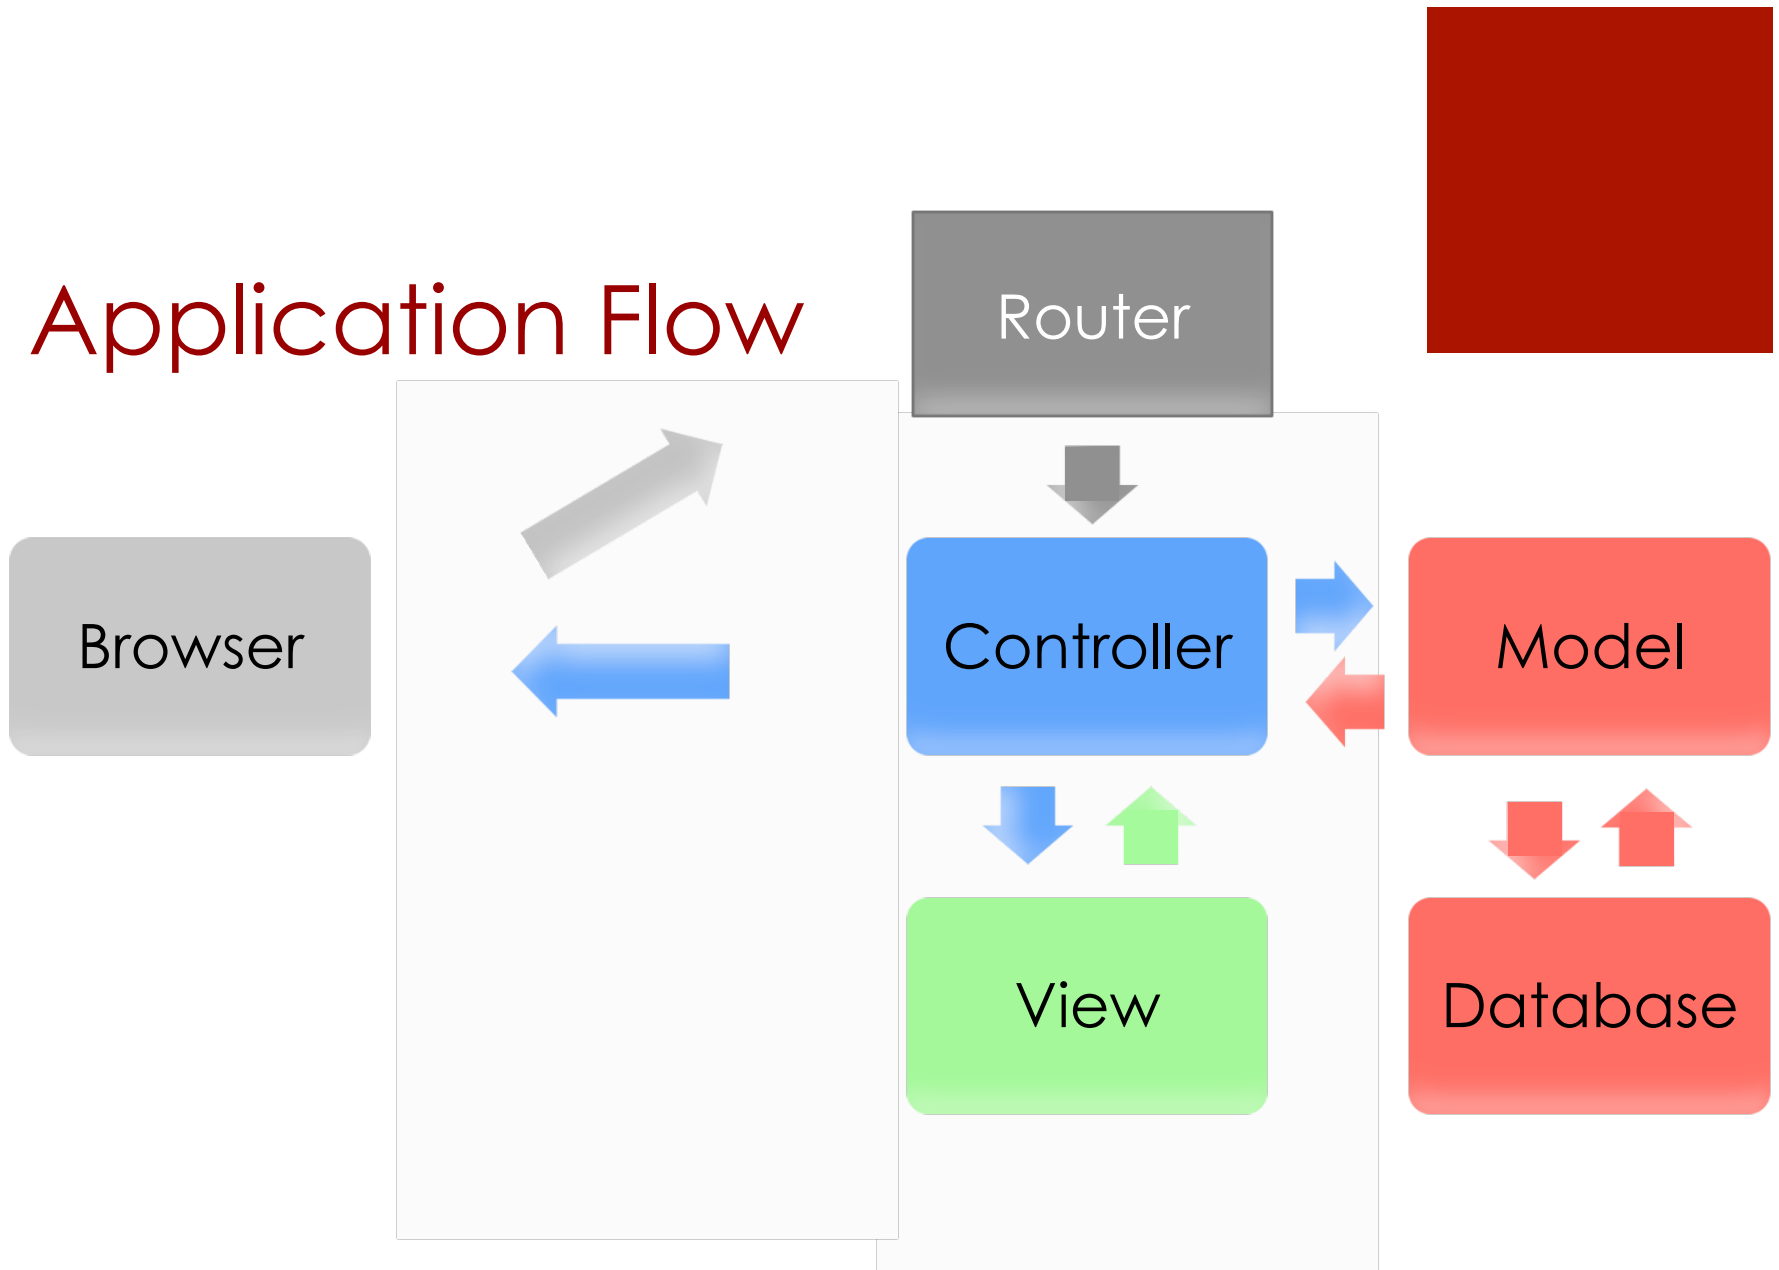

- Active Record (cont.)
  - Easy to retrieve objects
    - `User.all`
    - `User.find(20)`
    - `User.find_by(first_name: "John")`
  - Easy to update objects
    - `user = User.find(20)`  
`user.name = "Phillip"`  
`user.save`  
----- or -----  
`user.update_attribute(:name, "Phillip")`  
----- or -----  
`user.update_attributes(name: "Phillip", age: 50)`
